

Editor's Comment:

I am afraid to accept the MS in its current form due to the following reasons:

1. The objective of the paper is missing in the introduction section and the research gap is missing as well.
2. The abstract could be shortened as I have highlighted in the MS (attached)
3. The methodology is not clear:
 - a. Sampling sites could be explained and why these sites were chosen.
 - b. The procedure to take data by using different instruments is ambiguous.
 - c. the frequency of samples is missing
4. The authors have written results and discussion although the discussion part is completely missing and the results have not been mentioned in this section, however, they have indicated the table No where the results have been tabulated
5. The pathetic part of the paper is the title "Indoor air quality and hazards associated with laundry operations in Ibadan metropolis, Nigeria" I could not find a single hazard mentioned in the MS.

I suggest you share my points with reviewers first who have reviewed the paper and then with the authors.
