

Editor's Comment:

The purpose of this study was to discuss and point out which environmental parameters are considered preponderant within the water classification criteria, in order to contribute to the expansion and solidity of the typology of Amazonian aquatic systems. The manuscript is well written and the experiments done in a satisfactory manner. Few errors should be corrected.

Page 1: Abstract: To use an abbreviation, write the full name in the first instance and follow it immediately by the abbreviated version in brackets: For example: Principal component analysis (PCA): Abbreviation should be mentioned in full before abbreviation. Page 10; first line: Dissolved inorganic carbon (DIC).

Page 15: Correct reference 27: "Drever, James I" instead of "Doctor ever JI".

Editor decision: Accepted after this minor revision.
