

Editor's Comment:

The below mentioned paper is interesting, especially from practical point of view and properly elaborated. The Authors improved the revised version of the manuscript according to reviewers comments. In my opinion the paper could be published in Journal of Advances in Microbiology after making following minor revisions:

1. All figures and tables should be cited in proper places in the text of the manuscript.
2. On page 7 Figure 2 should be cited instead of Figure 1.
3. The references should be presented in uniform style according to the Journal's rules.
