EDITORIAL COMMENT' S on revised paper (if any)	Authors' response to editor' s comments
1. The author(s) may slightly extend the methodology part and explain the basic things like how the sample size (Patient population) is fixed.	A convinence sampling method was employed where 150 subject where selected and group into hypertensive, normotensive and hypotensive, with 50 subject in each group. The selection was done systematically from the population of pregnant women during their antenatal visit weekly where the number of 50 subject was obtained in each group.
