(If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</p>	<p>The manuscript is very important for scientifically community</p> <p>The Title is suitable</p> <p>The abstract is comprehensive</p> <p>The subsections and structure are appropriate</p> <p>The manuscript is scientifically correct</p> <p>The references are sufficient and are high quality</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>The English quality is suitable</p>	
<p>Optional/General comments</p>	<p>Carrying out a quality systematic review on a subject of such clinical need as the one addressed by the authors , is appreciated by the population of clinicians and health care professionals involved in this subject, and even more so by the large world population affected. Annually it is estimated that approximately 15 million people suffer a stroke and of these some 5 million die and another 5 million are severely disabled. The World Health Organization estimates that a stroke occurs in the world population every 5 seconds.</p> <p>For this reason, the authors must be congratulated for this review, which provides very important and extremely useful data for professional health practice on the combination of two extremely important rehabilitation procedures to care for the affected population. This article is guaranteed wide visibility that will affect the impact factors of the journal and the prestige of the authors</p>
