<p>Optional/General comments</p>	<p>This study was done to develop a liquid herbal sindoor containing flower petal extract of <i>Rosa indica</i> L., and to evaluate the stability, antioxidant and antibacterial activities of the developed formulation. The formulation showed antioxidant activity and its stability was assessed in terms of pH values and color stability of the flower extract. It was observed that both these properties did not show any significant changes. The prepared herbal liquid sindoor was found safe to use having a potential to substitute the toxic lead tetraoxide (Pb₃O₄) containing sindoor available in the market.</p> <p>Manuscript is very well written, tables and figures are correlated.</p>
