

**Editor's Comment:**

This paper is titled "Analysis Of Forced Convection On Velocity Profile And Temperature Distribution In A Square Enclosure" is very interesting. This paper focuses on forced convection in a three dimensional square enclosure with a heater placed at the center, a window on one of the adjacent walls and two fans placed along the other wall.

The author addressed the main concerns from the reviews, the revised version of the manuscript appears to be good. It looks READY for publication.
