

**Editor's Comment:**

Editor decision regarding Ms IJECC 105477

Determinants of Farmers' adaptation strategies to climate change  
in the Hyper-arid partially irrigated western plain of Rajasthan

The research is of obvious practical interest, and the study is well conducted and reported.

Two additional suggestions are yet to be considered by the Authors:

- 1) In the section "Study area", please replace "cube" by "square"
- 2) As one of the Reviewer, I also wonder if the claimed "average rainfall 160 mm per month" (i.e. almost 2000 mm per year) is really representative of an "hyper-arid" desertic region: please seriously check for this.

After these points above have been addressed and corrected if necessary, the manuscript can be considered acceptable for publication in IJECC.
