

Editor's Comment:

An additional requirement to the Authors: it makes no sense to provide conidia size at the precision of 1/100 of μm , given that the range of variability of conidia size is, usually, at least several μm . It would be more relevant and fruitful to provide an estimate of the scatter of conidia sizes (range of variation or standard deviation).

I strongly invite the Authors to provide this data in a new version of the manuscript before it being accepted for publication in IJECC.
