

Review Form 1.7

Journal Name:	International Journal of Environment and Climate Change
Manuscript Number:	Ms_IJECC_105867
Title of the Manuscript:	A Comprehensive Review on Post Harvest Physiological Disorders in Citrus Fruit Crops (Citrus spp.)
Type of the Article	Review Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

Review Form 1.7

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</p>	<p>YES</p> <p>YES</p> <p>YES</p> <p>YES</p> <p>YES</p> <p>YES</p> <p>MOST OF THEM</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	DEFINITELY YES	
<p>Optional/General comments</p>	<p>On page 2, Post-Harvest Physiology of Citrus Fruits. It is very important to remark that citrus fruits are non-climacteric fruits, thus, they will not continue their ripening process once they are removed from the plant since they have no carbohydrates reserves. Please consult Ting, S.V. and J.A. Attaway 1971. Citrus Fruits. In Hulme (ed) The Biochemistry of Fruits and their Products. Vol. II, Chapter 3, Academic Press, New York.pp151-153.</p> <p>Biale, J.B. 1960. Respiration of Fruits. In Encyclopedia of Plant Physiology. Vol. 12(2). W: Ruhland (ed). Springer. Berlin pp 531-592.</p> <p>Kays, S.J. 1991. Respiration. In Postharvest Physiology of Perishable Plant Products. Ed. AVI New York pp 98-142.</p> <p>On page 4. I recommend to write any citation about citrus physiological disorders instead of giving examples on rats (page 13, citation no. 39). There are many phytopathology books. You do not mention oleocellosis, for example, very important.</p> <p>References: It could be more proper if you put equal order to citations, i.e. second names' order in all citations, just to be uniform.</p> <p>On page 14 it is better to look for fruits and vegetables citations rather than hospitals information (citation no. 49 and 50). There is so much references about fruit phytopathology. You do not have to mix it with human pathology.</p>	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Are there ethical issues in this manuscript?</p>	<p><i>(If yes. Kindly please write down the ethical issues here in details)</i></p>
