

Editor's Comment:

- 1) The equations in the paper should be numbered for better reference and clarity.

- 2) It is recommended to use either Microsoft equations or LaTeX for rendering the equations in the paper to ensure consistency and readability.

- 3) The use of "/" in Table 4 should be explained more clearly to enhance the reader's understanding.

Once these comments have been addressed and the necessary revisions have been made, the paper will be suitable for publication in the Asian Journal of Probability and Statistics.
