

**Factors Associated With Increased Cases Of Brucellosis Among Patients ~~Aged 18 Years~~
~~And Above Hospitalized~~ At Kampala International University Teaching Hospital,
Bushenyi, District.**

Abstract~~ABSTRACT~~

Background: The government has employed numerous strategies ranging from animal vaccination, quarantines, free tests and diagnosis.

The purpose of this study was to determine factors associated with increased cases of brucellosis ~~among patients aged 18 years and above~~hospitalized at Kampala International University Teaching Hospital.

Methodology: ~~We conducted This was~~ a quantitative cross-sectional study which employed simple random sampling to select 36 patients aged 18 years and above attending at Kampala International University Teaching Hospital who consented to take part.

Results: ~~The majority of respondents~~ 14 (n= 14; 38.9%) ~~respondents~~ belonged to the age group of 26-30 years, followed by ~~the respondents belonged to the age group of 31 years and above~~ 2 (n= 12; 33.3%), ~~respondents belonged to the age group of 31 and above~~ while ~~the only-interrogated persons~~ 4 (27.8%) belonged to the age group of 18-25 years ~~were weak~~ (n= 10; 27.8%). Majority of the respondents, ~~15~~ (n= 15; 41.7%) ~~respondents~~ revealed that they were ~~c~~Christian-catholic. ~~Moreover, M~~most of ~~thesethe~~ respondents ~~19~~ (n= 19; 52.8%) revealed that they studied only secondary education ~~meanwhile only~~, 10 (27.8%) were primary leavers. ~~These respondents belonged in the majority~~ The majority ~~19~~ (52.8%) ~~respondents~~ belonged to Banyankole/Bakigatribe (n= 19; 52.8%) and were married (n= 28; 77.8%). ~~More so, majority of the respondents, 28 (77.8%) were Married.~~ The ~~résultats of this study findings on income level~~ showed that ~~majority~~ 13 (36.1% (n= 13) of respondents ~~lived with the incomes included between~~ belonged to 100,000 and ~~—~~150,000 Uganda shillings. ~~They were in majority~~ Majority ~~that~~ 14 (n= 14; 38.9%) at 1 – 2 kilometers ~~respondents said that the distance~~ to the nearest health facility ~~meanwhile was~~ 1 – 2 kilometers followed by 4 (27.8% (n= 10) of respondents ~~who said~~

Comment [AK1]: Your abstract is too long (337 words). Please reduce it. Normally we must have an abstract with 250 words.

~~it were at~~ was 5 and above kilometers. ~~Approximately Majority 21~~(58.4% (n= 21) of respondents ~~were~~ agreed that there is presence of diagnostic facilities of brucellosis and ~~majority 23~~(63.9 % (n= 23) of these respondents ~~agreed that they adhered~~ to treatment of brucellosis.

~~CIn conclusion;~~ ~~This~~the study showed that age, level of education, tribe, household income, property ownership, cost of treatment, distance from the health facility and poor service utilization ~~influence~~ there are many factors associated with increase in brucellosis cases among patients at Kampala International University Teaching Hospital, ~~which are significantly important and they include age, level of education, tribe, household income, property ownership, cost of treatment, distance from the health facility and poor service utilization.~~ Brucellosis places significant burdens on human healthcare systems and limits the economic potential of individuals, communities, and nations where such development is especially important to diminish the prevalence of poverty.

Introduction

The global burden of human brucellosis accounts for more than 500,000 new infections, with 12% deaths annually (WHO, 2019) and it occurs through direct contact with infected products of raw or half cooked meat, blood or ingestion of unpasteurized milk (Ellis, 2016). Brucellosis has been a challenge among those aged above 18 years with symptoms of increased fever, constant headache, joint pains, loss of appetite, as well as night sweats among others (Godfroid, et al., 2017).

In Africa,

~~b~~Brucellosis ~~in Africa~~ is high in pastoral corridors and communities who largely come into contact with fluids from infected animals by several routes such as direct inoculation, inhalation of infectious sprays and ingestion of contaminated milk and meat products (Corbel, 2016; References????). Indeed, WHO (2018) reported that in the horn of Africa, human brucellosis is increasing at an annual rate of 4.3%. According to Huber & Sanders (2017), Findings carried out by Huber and Sanders in 2017 indicated that by 2015, human brucellosis was 24.5% in Africa countries in 2015 and it is currently at a rate of 26.5% ~~(WHO 2018)~~. Its prevalence in ~~the~~ Sub-Saharan Africa, ~~human Brucellosis prevalence~~ ranges from 5 to 45% (Huber & Sanders, 2017).

Comment [AK2]: Add other new references

Comment [AK3]: Add other new references

Formatted: Highlight

In Uganda, the ~~studies conducted about prevalence of human brucellosis reported prevalence rates stood at a rate of 15.8% in 2014 (References???) and to a current rate of 27% in 2019 with~~ in Northern, Eastern and Western cattle corridor areas as reported in 3 districts in east, central and western Uganda (References???). However, a human brucellosis prevalence of 13.3% has been reported in urban settings of Uganda. ~~This prevalence increased, and the prevalence at of 7% in 2017 and 12% in 2019 among the butchers in Mbarara and Kampala districts respectively (References?????).~~

Formatted: Highlight

Formatted: Highlight

Formatted: Highlight

However, the government of Uganda under Ministry of Health has worked hard to reduce the prevalence of brucellosis, for example provision of mass sensitization on how to prevent it like avoiding consuming raw meat or unpasteurized milk, cheese, and ice cream, wearing gloves and protective glasses when handling animals or animal tissues and prescription of antibiotics like doxycycline, streptomycin and tetracycline in most governmental health facilities (MOH, 2019). The government has employed numerous strategies ranging from animal vaccination, quarantines, free tests and diagnosis (MOH, 2019).

Comment [AK4]: This sentence is too long. Please reduce it and simplify it.

Despite the above interventions by the government, there has been an annual reported increase rate of human brucellosis at 3.5% since 2000 from the affected communities (MOH, 2019). For example according to the HMIS report of (2019) of Kampala International University Teaching Hospital, approximately 6.3% cases of human brucellosis among patients age 18 years and above were diagnosed in 2015 and, 2.5% in 2016. It and it increased again to 3.9% and 4.2 in 2018 and 2019 respectively (References?????).

Formatted: Highlight

The increase in human brucellosis leads to complications arthritis, inflammation and infection of the testicles, central nervous system infections, endocarditis, challenges of liver malfunction and death in cases of poor medical intention (Magona & Etoori, 2017; MOH, 2018). Therefore, this has prompted the researcher to explore factors responsible for the increased cases of brucellosis among patients aged 18 years attending at Kampala International University Teaching Hospital.

Materials and Methods

Comment [AK5]: You have just interviewed 36 persons. It is too weak for a scientific study. The size of your study sample is really too small (36 respondents).

Study design, duration, and site

Comment [AK6]: Specify the period of the study and put here the map of location showing the study site.

This study ~~is was~~ a cross-sectional descriptive study conducted at Kampala International University Teaching Hospital Bushenyi-Ishaka Municipality, Bushenyi District. ~~A~~ along Mbarara-Kasese Road in western Uganda with seasonal climate Bushenyi district is about 360 km from Kampala city. It is bordered by Mitooma and Ntungamo districts in the south, Sheema in the east, Buhweju in the north and Rubirizi in the west (~~References????~~). ~~The method used was based on survey by questionnaires for collecting on quantitative of data via -was quantitative to establish~~ the opinions of the respondents about the study problem ~~under investigation~~.

Formatted: Highlight

Inclusion criteria

The study included patients aged 18 years and above attending at Kampala International University Teaching Hospital who were found at the Hospital during the study. Only people ~~who were~~ willing to participate and who consented were included in ~~this the~~ study.

Exclusion criteria

- ~~All~~ people who were unwilling to participate and those who did not consent, those that were mentally and physically incapable to stand the interview were excluded.

Formatted: Font: Times New Roman, 12 pt

Formatted: Normal, No bullets or numbering

Data collection procedure

The researcher got an introductory letter from the school which she presented to the hospital administrators who gave permission for data collection. The researcher introduced herself to the participants and explain to them the purpose of the research. Questionnaires were given to respondents to fill and those who were not able to read and write were guided by the researcher. Then, the researcher checked through the filled questionnaires before leaving the data collection area to ensure their completeness.

Data management

Editing: ~~This involved checking the questionnaire for completeness and improperly filled questionnaires will be sorted. Completely~~ filled questionnaires were kept in the cupboard for safety and confidentiality and were later ~~used taken~~ for ~~data~~ analysis.

Comment [AK7]: This sentence is not clear. Please reformulate it for a better comprehension.

Coding: All questions ~~in of~~ the questionnaire were coded for ~~making~~ easy analysis and ~~help in~~ reducing data ~~into~~ manageable proportions.

	Adventist	6	16.7
Level of education	None	2	5.6
	Primary	10	27.8
	secondary	19	52.8
	Tertiary	5	13.9
Tribe	Banyankole/Bakiga	19	52.8
	Baganda/Basoga	5	13.9
	Bakonjo	4	11.1
	Batoro/Banyoro	8	22.2
Marital status	Married	28	77.8
	Single	4	11.1
	Divorced	4	11.1

In response to age brackets of the respondents, majority 14 (38.9%) respondents belonged to the age group of 26-30 years, followed by 12 (33.3%) respondents belonged to the age group of 31 and above while only 10 (27.8%) belonged to the age group of 18-25 years.

source: Name of principal (2021).

Majority of the respondents, 15 (41.7%) respondents revealed that they were Christian catholic, 14 (38.9%) respondents were Christian protestant, and 6 (16.7%) respondents were Adventists while the least 1 (2.7%) respondents was a Muslim.

Respondents were also asked about their educational levels. Most of the respondents 19 (52.8%) revealed that they studied only secondary education, 10 (27.8%) were primary leavers while the least number of respondents 5 (13.9%) had tertiary level of education. About the tribe,

On the other hand, respondents tribe was also considered and the majority 19 (52.8% (n= 19) of respondents belonged to Banyankole/Bakiga tribe while the least 4 (11.1% (n= 4) of respondents belonged to Bakonjo (Table 1). The most of the respondents were married (n= 28; 77.8%)

More so, majority of the respondents, 28 (77.8%) were Married while only 4 (11.1% (n= 4) of respondents were single and divorced.

Socio-economic factors associated with brucellosis

Household income

Respondents were asked about their household income and responses are shown in table 2 below. As for income level, approximately 36.1% (n= 13) of interviewed persons got from 100,000 to 150,000 Uganda shillings while only 11.1% (n= 4) of respondents had 310,000 Uganda shillings and above (Table 2). The above result therefore showed that majority of the respondents belonged to the humble background status.

Table 2: showing Household income of the respondents

Variables		Frequency (n _f)	Percentage (%)
<u>(Uganda shillings)</u>	100,000 – 150,000	13	36.1
	160,000 – 200,000	6	16.7
	210,000 – 250,000	8	22.2
	260,000 – 300,000	5	13.9
	310,000 and above	4	11.1

Conclusion and recommendations

Comment [AK17]: The conclusion section must be corrected and re-written.

~~This study enabled to determine the factors associated with increased cases of brucellosis in Kampala International University Teaching Hospital. It The study showed that age, level of education, tribe, household income, property ownership, cost of treatment, distance from the health facility and poor service utilization play really an important role in the increase of brucellosis cases among patients at Kampala International University Teaching Hospital. Like this study was conducted during a short period, the next study must be more long with more respondents in order to improve the quality of data. So, we recommend the following actions:~~

Comment [AK18]: This is an example.

~~there are many factors associated with increase in brucellosis cases among patients at Kampala International University Teaching Hospital which are significantly important and they include age, level of education, tribe, household income, property ownership, cost of treatment, distance from the health facility and poor service utilization.~~

Formatted: Font:

Brucellosis places significant burdens on human healthcare systems and limits the economic potential of individuals, communities, and nations where such development is especially important to diminish the prevalence of poverty.

Comment [AK19]: Reformulate and re-write this sentence.

Recommendations

The implementation of public policy focused on mitigating the socioeconomic effects of brucellosis in human and animal populations is desperately needed.

Comment [AK20]: Please reformulate and re-write this sentence.

The interdisciplinary “One Health” nature of the effects that brucellosis has indicate that collaboration of veterinary, medical, public health, cultural, economic and social experts is needed to effect a change in disease burden.

Comment [AK21]: Reformulate and re-write this sentence.
