

Editor's Comment:

In addition to the revision comments found the following :

. The topic is important for breeders, silk makers and scientific community but it lacks scientific research and modern scientific references.

- The author needs to reformulate abstract to include and indicate all results obtained and detail the components of the processors used.

. The introduction lacks references and only includes 6 references, most of which are old.

- Most of the references are old, and the author needs to add modern references.

- The discussion of the results must be expanded, reformulated and clarified, especially Tables 3 to 6, to suit the statistical analysis of each treatment since they have a large variation.

The author must write the complete terms in a list or at the beginning of each time.

- Authors must follow the journal system in designing, writing titles, and the list of references.

- Contents need to expand without references as correction with red color.

- Reformulate the results and discuss them properly in light of analyzes and comparison with others.

- The author makes the corrections shown in red.

Therefore,

After the author has done everything required above in this article, the article is considered suitable for publication in this magazine.
