<p>Optional/General comments</p>	<p>The number of pts studied is too small to get general conclusion. Anyway, the study has been well conducted and the results are interesting finalized to the importance to prescribe an ECG-Holter to pts with stroke due to the possibility they have arrhythmias in some cases important and dangerous. The causes are well emphasized (brain-heart connection, nervous system, age that include atherosclerosis and electrolytic unbalance). It will be interesting to achieve a new study with more and more pts to have a statistic analysis with significant results.</p>
