

Editor's Comment:

I will again check the whole manuscript. I think the manuscript is poorly written.

1. The abstract only contains methods and results. The authors did not put a problem statement/rationale followed by an aim/hypothesis, methods, results, and conclusions/implications.
2. According to the title, introduction should contains following topics such as (i) Background of Agroforestry Systems, (ii) Significance of Chickpea in Agroforestry Systems, (iii) Importance of Integrated Nutrient Management, (iv) Role of Teak in Agroforestry Systems, (v) Research Gap and Justification, (vi) Objectives of the Study etc. I could not find any of these topics related to the research.
3. Methods and materials utilized in conducting the research should include details on i. experimental design, ii. study area description, iii. selection and preparation of experimental site, iv. plant materials, v. nutrient management treatments, vi. application and management of nutrients, vii. data collection methods, viii. parameters evaluated, ix. statistical analysis
4. Result is the core of an article. Please remove points indicated by □ □ □ Try to write in paragraphs.
5. Figure/Table: For growth parameters please prepare figures, for yield parameters prepare a combined table.
6. Discussion: Please interpret and explain the findings of the study efficiently. Relate to what others have done.

General comments: Major revision is needed.
