

**Editor's Comment:**

An editorial decision on the peer-reviewed manuscript entitled "Association of Various Factors and HIV Infection in Pregnancy- A Clinico-Epidemiological Review" (Manuscript No.: 2024/INDJ/114821) submitted to the International Neuropsychiatric Disease Journal.

From a thorough analysis of the original and revised manuscripts as well as the reviewers' feedback, it is clear that their contributions were extremely valuable and constructive and led to a significant improvement in the quality of the manuscript. The authors skilfully incorporated the reviewers' suggestions, resulting in a more coherent, comprehensive, and journal-appropriate manuscript.

Aside from some minor issues related to formatting, reference checking, and language refinement, the manuscript is technically sound and comprehensive. In my opinion, it addresses a relevant topic and shows the potential for significant contributions to the current literature.

I recommend the acceptance of the manuscript.
