| <p>Optional/General comments</p> | <p>My comment regarding an article: A rare case of proliferative glomerulonephritis with monoclonal IgG deposits in an adolescent female; mimicking immune complex glomerulonephritis. This is an interesting case report and authors have collected a unique data and made a delta check. The paper is generally well written and structured and the case was presented in an excellent way. However, in my opinion the paper has some shortcomings in regards to place and time of the study, it should be place and time specific. In addition, some abbreviations firstly needed to be stated in their full name and the abbreviation between brackets, then used in abbreviated form. Furthermore I suggested to cite more relevant and recent literature, and make a comparison between this study and similar ones if present. In revised manuscript I have provided some remarks on the text (with yellow highlight) as it is required some modifications.</p> | |
