

Editor's Comment:

It is indeed an interesting piece of research work. I have gone through the revised paper and found that the authors have followed the majority of the scholastic comments/suggestions raised by the reviewers as well as substantially improved their manuscript in a worthwhile manner.. However, there are still some mistakes/errors in wordings and languages as well as formatting and arrangement of figures (e.g., X-axis, Y-axis lines and scale bars must have to be visible and clear), tables and references need to be revised according to the prescribed guidelines of the journal. In addition, the title should be changed to "Essential oils as a control alternative of *Fusariumfalciforme*, responsible for causing onion (*Allium cepa* L.) basal rot disease". Therefore, I recommend the manuscript for publication in Annual Research & Review in Biology.
