Title of the Manuscript:	Effects of Nurse-Administered Cognitive Behaviour Therapy in Managing Pathological Manifestations Associated with Substance Abuse
Type of the Article	

Review Form 3

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback (Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.</p>	<p>The research on the nurse-administered CBT to extract the pathological manifestations linked to substance dependence is imperative as it presents an efficient and readily available approach to implementing the treatment in primary care practices. This paper exploits the knowledge of nurses in implementing CBT suggesting a possible solution towards the treatment of SUDs in addition to the conventional medical approaches. In addition, it underlines the contribution of nursing professionals on the management of substance abuse, can enhance patient's prospects and extend the range of behavioral health intervention</p>	
<p>Is the title of the article suitable? (If not please suggest an alternative title)</p>	<p>Suitable</p>	
<p>Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.</p>	<p>Abstract is okay</p>	
<p>Are subsections and structure of the manuscript appropriate?</p>	<p>Yes</p>	
<p>Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.</p>	<p>The "Effects of Nurse-Administered Cognitive Behaviour Therapy in Managing Pathological Manifestations Associated with Substance Abuse" study is scientifically robust and technically sound due to its rigorous design, likely including a Pre-test and post-test group design that help to identify the effectiveness of intervention protocol. It employs standardized protocols for delivering CBT, uses validated measures to assess outcomes, and applies appropriate statistical analyses. Furthermore, the study adheres to ethical standards with informed consent and peer-reviewed publication, ensuring reliability and real-world applicability of its findings.</p>	
<p>Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.</p>	<p>Yes</p>	
<p>Minor REVISION comments</p> <p>Is the language/English quality of the article suitable for scholarly communications?</p>	<p>yes</p>	
<p>Optional/General comments</p>	<p>Sample size calculation is not mentioned Homogeneity between groups before intervention is not established Author can include the t-test analysis (within the group, Dependent t-test)</p>
