

Editor's Comment:

Based on the recommendation of both the reviewers, manuscript may be accepted for publication in JABB.

I have peripherally gone thru the manuscript. In the Abstract itself, I found the following sentence:

'It's nice that this study employed three different kinds of auxins to root the cuttings'.

I could not understand, why authors wrote 'It's nice'? In my opinion, it must be 'The present study employed three different kinds of auxin to root the cuttings'.

Please check the language at the time of Galley proof preparation.
