

**Editor's Comment:**

1. Is a manuscript that needs a lot of improvements
2. It is very elementary scientific use of language
3. Many explanations about the result do not match with the tables and figures
4. Methodology needs a lot of improvement
5. The authors mentioned a very big range of salinity. This can modify the results and the anova it is not only one-way, because is Urea and salinity  
two variable conditions and need to make two-way anova test
6. It need to send a good english language translate and check the grammar.
