Cervical cerclage is typically recommended for women with a history of cervical insufficiency, characterized by painless cervical dilation leading to recurrent mid-trimester pregnancy losses. It may also be indicated for women with a short cervix diagnosed via transvaginal ultrasound in the second trimester, especially if they have a history of preterm birth.	
<b>Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</b> =	<b>After 6 author please include et.al and include DOI.</b>
