

Editor's Comment:

The Author's responses to the Reviewers' comments in form of the statements: "Okay", "noted" or "revised" are not acceptable, as they don't include any details, especially taking into account that potential changes in the revised version 1 of the manuscript are not marked in any color, that makes the assessment of the correctness of eventual revisions by Editor very difficult. Unfortunately the revised version 1 of the manuscript does not include any significant revisions suggested by the Reviewers. For example the "Abstract" as well as sections "Pathogen Life Cycles and Infection Processes" and "Tri-Trophic Interactions" are carbon copies of the text from original version of the manuscript. In turn in "Introduction" section only few words have been changed. Moreover the references Mark Levitin. Plant Diseases in Globally Changing Russian Climate. Journal of Life Sciences, 2015, 9, p. 476-480. and Mark Levitin. Climatic Anomalies and Plant Diseases. Recent Research Advances in Biology, 2021, Vol. 9, 28, Page 76-86. have not been included in the revised version 1 of the manuscript. That is why in my opinion the manuscript in present form should not been published in the Journal of Advances in Microbiology.
