

Editor's Comment:

Though atrial fibrillation and its complications have been dealt with in the literature a number of times. The Scientific content of the manuscript is very important for Medical Science. It highlights the atypical causes of young-onset of Ischemic brain stroke. The authors have well emphasized the differentials while evaluating such cases. It also emphasizes the need for thyroid function testing in an atrial fibrillation case and an appropriate treatment of such condition at the right time would prevent the occurrence of future events.

With due consideration, the decision on the manuscript " for the Asian Journal of Cardiology Research " is Accepted.
