

Review Form 3

Journal Name:	International Journal of Environment and Climate Change
Manuscript Number:	Ms_IJECC_126938
Title of the Manuscript:	CLIMATE CHANGE AND ITS ECONOMIC IMPACTS IN MEXICO
Type of the Article	Original Research Article

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.	The economic analysis of climate change has a high level of risk, which makes it a process where risk must be managed. Despite these characteristics and limitations, it is a fundamental instrument for public policy and society since it identifies options and alternatives to build sustainable development strategies and protect natural resources and ecosystems for future generations beyond their economic value. However, it must be understood that projections are not one-off forecasts but only prospective scenarios.	
Is the title of the article suitable? (If not please suggest an alternative title)	Yes	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	ok	
Are subsections and structure of the manuscript appropriate?	Arrangement of Figures need to be checked	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.	Regional models show temperature increases between 0.5 and 5 °C, while changes in precipitation will range between -20.3% and 13.5%. Low soil moisture, negative changes in vegetation (NDVI) and drought (SPEI12) will lead to soil moisture deficits, water stress, sparse vegetation and semi-permanent drought. The entire country is expected to be subjected to moderate (Central and Southern) to extremely severe (Northern) droughts that will worsen by the end of the century. Climate change will have effects on crop yields, livestock reproduction, production of meat and its derivatives throughout the country in a differentiated way, with increases in food prices. It will also cause a deficit of land suitable for agricultural activities; and water availability.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form. :	Some Latest may be added	

Review Form 3

Minor REVISION comments Is the language/English quality of the article suitable for scholarly communications?	Discussion part may be improved	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
