Review Form 3

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback (Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.	This manuscript is significant for the scientific community as it provides a comprehensive overview of common and less frequent oral mucosal lesions in children, emphasizing the need for timely diagnosis and treatment. By highlighting the connections between oral manifestations and systemic disorders, it encourages a multidisciplinary approach to pediatric care. This knowledge can enhance practitioners' ability to reassure parents and address potential complications early on. I appreciate this manuscript for its thoroughness and its practical implications for clinical practice. It effectively bridges the gap between clinical observations and underlying systemic issues, which is crucial for improving child health outcomes.	
Is the title of the article suitable? (If not please suggest an alternative title)	The title is suitable because it clearly reflects the content and focus of the manuscript on oral mucosal lesions in children	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	The paragraph effectively summarizes the key points for an abstract, but it could be refined for clarity and conciseness	
Are subsections and structure of the manuscript appropriate?	I recommend grouping similar topics together. For instance, lesions could be categorized by type (e.g., benign tumors, traumatic lesions) or by presentation (e.g., symptomatic vs. asymptomatic).	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.	The integration of data from studies, such as the Italian cohort, strengthens its validity by providing empirical support for the findings. Overall, the manuscript demonstrates a clear commitment to advancing knowledge in this area, making it a valuable contribution to the field.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form. -	Yes, the references are sufficient.	
Minor REVISION comments Is the language/English quality of the article suitable for scholarly communications?	I recommend adding transitional phrases between paragraphs and sections to improve the overall flow of the manuscript. This helps guide the reader through the narrative.	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
