Review Form 3

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.	I like this manuscript as it is essential to switch with biopesticides rather than chemicals, which reduces the fertility of soil and increase pollution and other harmful effects. By publishing this manuscript, public will be able to choose the right remedy for jassid attack in their farm.	
Is the title of the article suitable? (If not please suggest an alternative title)	Simple and briefly presented title which is suitable for the manuscript	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	No need of any further addition or deletion	
Are subsections and structure of the manuscript appropriate?	Yes, appropriate	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.	I am satisfied with the overall presentation but still have a confusion in the result the author has recorded because, the author used NSKE + Cow urine and have a better result than that of all the arks and astras used in the study. As per the information I received, all the arks and astras mentioned in this study is having same and/or more effective ingredients than a simple NSKE + Cow urine mixture. Then how can the author get better result in a simple mixture than a complex effective mixture? Anyways the manuscript must show only the exact result the author received and it's absolutely fine in proceeding with the result author recorded.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	References not sufficient. As per my study, lot more researches are already done based on the same background and the author can go through Google Scholar for further reference addition. I suggest to have at least 10-15 references. And please add numbering if possible	
Minor REVISION comments	Very simply explained	
Is the language/English quality of the article suitable for scholarly communications?		
Optional/General comments	It will be better if the author could add the composition of the biopesticides used as a table for better comparison.	

PART 2:

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
