

Review Form 3

Journal Name:	Asian Hematology Research Journal
Manuscript Number:	Ms_AHRJ_127278
Title of the Manuscript:	Diagnosis and management of an acquired Factor XIII deficiency in a limited resource setting
Type of the Article	Case report

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.	An interesting case of acquired factor XIII deficiency in a young boy who presented with intracranial bleed after a fall. The clinical suspicion of a bleeding disorder despite a normal coagulation profile and bleeding time deserves applause. However, impact of the fall was not described to justify the suspicion for bleeding disorder.	
Is the title of the article suitable? (If not please suggest an alternative title)	The title of the article is suitable but maybe can add on “: a case report” at the end of title to indicate that it is a case report rather than a topic in a book.	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	The abstract of the article is comprehensive, but I suggest putting the abstract as unstructured format without subsection.	
Are subsections and structure of the manuscript appropriate?	Yes, the subsections and structure of the manuscript are appropriate.	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.	It is quite a common case of acquired clotting factor deficiency including the diagnosis and management whether it is with limited resources. What is lacking in this case report is the detailed presenting history and physical findings leading to the suspicion of the diagnosis of bleeding disorders.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	References are sufficient and mostly recent.	
Minor REVISION comments Is the language/English quality of the article suitable for scholarly communications?	The language of the article is suitable.	
Optional/General comments	Suggest to focus and show the detailed history of presentation and physical findings to lead to the suspicion of bleeding disorder in the “Case Report” section, as the diagnosis and management of this condition is quite standard and common.
