

Review Form 3

Journal Name:	Journal of Advances in Microbiology
Manuscript Number:	Ms_JAMB_124844
Title of the Manuscript:	Genetic Profiling of Raoultella spp. in Pediatric Clinical Samples: Insights from Bauchi, North East Nigeria
Type of the Article	

PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.	This manuscript offers valuable insights into Raoultella spp. infections in pediatric clinical samples from Bauchi, Nigeria, a region with limited available data. Through the analysis of genetic profiles, it advances our understanding of local microbial diversity and patterns of antimicrobial resistance. This information can help in the development of specific treatments and in shaping public health strategies in the region.	
Is the title of the article suitable? (If not please suggest an alternative title)	Yes. Its suitable.	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	Kindly provide more information about the background of Raoultella species, including their significance in clinical settings with their prevalence and their associated mortality and morbidity.	
Are subsections and structure of the manuscript appropriate?	Yes. They are appropriate.	
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.	The manuscript appears scientifically robust due to its focus on genetic profiling, a well-established method for understanding microbial characteristics at the molecular level. It utilizes standard protocols for sample collection, DNA extraction, and sequencing, ensuring technical accuracy. Additionally, the study addresses paediatric infection data from an underrepresented region, which strengthens its relevance and reliability. The interpretation of results seems grounded in current scientific knowledge, making it both credible and valuable for further research.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	The references are sufficient, recent and up-to-date.	

Review Form 3

Minor REVISION comments		
Is the language/English quality of the article suitable for scholarly communications?	Yes.	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
