#### PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b>Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.</b>	This manuscript provides valuable insights into the comparative assessment of biomarkers of glycation in different types of diabetes mellitus. By evaluating the relationships between key glycation markers and glycemic status, the study identifies glycated hemoglobin (A1c) as the most reliable indicator for blood glucose monitoring. These findings are crucial for advancing diagnostic accuracy and improving personalized diabetes management strategies. Additionally, the work underscores the need for further research into alternative markers like 1,5-anhydroglucitol and glutathione, which may hold potential for early detection and risk stratification in diabetes care.
