

Editor's Comment:

The authors made the changes suggested by the reviewers. However, the paper needs a more accurate review, since many citations in the text are not in the references, for example: authors 'Dietschi and Spreafico'23 (page 3) and citation 33 (page 5 - the number of references will up to 29), denoting possible copying of other papers. Authors must be careful to check all citations and review references.

-Also, a citation was added to the text without properly reviewing the numerical order of subsequent citations. For example: Cuspal [29] on page 9 was cited after citation 22, which should now be citation 23 (and not 29) and all subsequent citations should also be changed.

- References must be updated.

-Page 3:The acronym "STA" should be clearly defined the first time it is used in the text. So, the corrected order in the text is: supracrestal tissue attachment (STA). In page 6 can be used only the acronym STA.

-The acronym "SCL" should be clearly defined the first time it is used in the text. So, it should be written this way: 'surgical crown lengthening (SCL)' in page 7 ,

-Spacing in the text must be reviewed, in addition to punctuation. For example, titles and subtitles should not be punctuated.

-Discussion should be more elaborated.

Therefore, after all the changes suggested here, the article must be re-evaluated again before being accepted.
