(Present study concluded that the autoregressive time series model can be used effectively to predict the pre and post monsoon ground water level at different locations of Ambedkarnagar District the better predictions will help the Farmers and policy makers to optimally utilize the groundwater resources. It is providing the solutions to execute the artificial recharge structure at the appropriate locations with best geological condition to enhance the recharge rate at least cost for control of declining groundwater level.)</p> <p>The results and Title are not matched of present article. Suggested title is "Monitoring the impacts of artificial recharge structures on water table at Ambedkar Nagar"</p> <p>The abstract is missing the basic components such as the research problem, objective, methodology, the results findings, and recommendation. It should be rearranged as per suggestions.</p> <p>Paper needs to rearrange as manuscript structure. Introduction and literature review paper merge and rearrange a proper introduction.
