

Review Form 1.7

Journal Name:	International Journal of Plant & Soil Science
Manuscript Number:	Ms_IJPSS_111918
Title of the Manuscript:	Genetic Variability, Path analysis and divergence studied in Sesame (Sesamum indicum L.)
Type of the Article	Original Research Article

Review Form 1.7

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>1. The manuscript is scientifically good and deals with a very important topic that supports increasing production and productivity of a very important crop in Africa</p> <p>2. The title is good, but to reflect the content of the research and be clearer, I suggest that it be as follows: Study of genetic variation, pathological analysis and divergence in sesame (Sesamum indicum L.)</p> <p>3. The abstract contains a large amount of information that is not presented in a clear manner. The results must be presented in the abstract in order and in a professional manner so that the researcher can reflect all the great effort he has made, the clusters must be arranged sequentially to clarify the results obtained. The paragraphs shaded in green in the abstract need to be rewritten, so that the results are clearly arranged and the results actually obtained are specified.</p> <p>4. The overall structure of the manuscript is good and follows the method of writing scientific papers</p> <p>5. The manuscript is excellent from a scientific standpoint and covers a modern topic</p> <p>6. Less reference was mentioned in the introduction and it is not recent, only one recent reference 2015 was mentioned, It is necessary to add recent references and mention previous studies that are directly related to the research topic</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>The manuscript, in terms of language, is good and understandable</p>	
<p>Optional/General comments</p>	<ul style="list-style-type: none"> - I think that using the statistical analysis method (correlation), is not suitable for conducting such an analysis. It would have been better to use another method to be clearer. - Keywords need to add some words to complete the meaning, and they were added to the review in red - The introduction is shortened to an almost inconvenient manner - The research objectives are not mentioned in the introduction, and the research objectives must be stated clearly. - The tables are many and overlapping and require more abbreviation and clarification. It is preferable to use diagrams for further explanation and clarification. - The conclusion and recommendations were very simplified and did not include all the recommendations and conclusions obtained by the researcher, although the researcher made a great effort and reached very good results, but they were not presented as they
