

Editor's Comment:

After analyzing the documents sent regarding the manuscript 2023/EJMP/110804 - "Antihyperlipidemic Bioactivity Guided Isolation and Structural Elucidation of Isolated Phytoconstituents from *Convolvulus pluricaulis* Choisy", my considerations follow:

The work is relevant from a scientific point of view and the authors made some of the corrections and adjustments requested by the reviewers. However, I still consider that there is a need for some small grammar adjustments throughout the text. I am sending as an attachment my correction suggestions for the highlighted points.

I consider it necessary to make corrections upon the conclusions of the work. My considerations regarding this point can also be found in the document mentioned above.

Finally, I would like to highlight that I see a need to update the bibliographic references. A fact already mentioned by the reviewers and which was not addressed by the authors. Only two of the 21 references were published in the last decade.

I believe that upon making the proposed corrections the article should be considered suitable for publication.
