<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</p>	<p>Introduction is very short, the same as the abstract. The title says review of the literature and although it is not a new article, its presentation should be considerably improved. Use OMIM numbering for entities and genes, use italics to describe genes. Clinical cases must be presented in a homogeneous manner. Does not use current references. Apert syndrome is the most common syndromic craniosynostosis, it deserves an adequate description and I insist on its form of presentation. A table with the clinical findings of the clinical cases would be a recommendation in the presentation of cases and their percentage of appearance in Apert syndrome.</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	Needs to be reviewed.	
<p>Optional/General comments</p>
