Manuscript Number:	<b>Ms_JAMMR_113394</b>
Title of the Manuscript:	<b>Second Victim: Health Managers' Perceptions</b>
Type of the Article	<b>Original Research Article</b>

**Review Form 1.7**

**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p><b>Compulsory REVISION comments</b></p> <p>1. <b>Is the manuscript important for scientific community?</b> (Please write few sentences on this manuscript)</p> <p>2. <b>Is the title of the article suitable?</b> (If not please suggest an alternative title)</p> <p>3. <b>Is the abstract of the article comprehensive?</b></p> <p>4. <b>Are subsections and structure of the manuscript appropriate?</b></p> <p>5. <b>Do you think the manuscript is scientifically correct?</b></p> <p>6. <b>Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</b></p> <p><b><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></b></p>	<p>1. The manuscript important for scientific community. Because for healthcare organizations to develop a culture of patient care that focused on improving the safety of that care.</p> <p>2. The title is not self-explanatory (it must be include, place, time etc.)</p> <p>3. The abstract not comprehensive. Because</p> <ul style="list-style-type: none"> <li>- <i>Introduction:</i> In this part, the rational of the study not explained. So you have to include the rational of the study</li> <li>- Study design, study of place and time is a part of methodology. so you can write under methodology</li> </ul> <p><b>e.g .Method:</b> an institutional qualitative study was conducted among -----from----- to-----</p> <ul style="list-style-type: none"> <li>- The recommendation in the conclusion part of the abstract is not included. So in your conclusion part add your recommendation one up to two line</li> </ul> <p>4. Subsections and structure of the manuscript partially appropriate. Because in methodology too short, and the result and discussion part have no separate section. This makes to identify the major discussion point.</p> <p>5. Partially the manuscript <b>is</b> scientifically Correct. Because to say scientifically correct it must be fulfilled the criteria, free from any grammatically error, spelling error pun cation error, and it must be accurate and concise. However, after comment if the author's correct it may be scientifically Correct. Otherwise as current evaluation does not met it.</p> <p>6. The adequacy of the reference is depended on the availability of literature. But still is not adequate. But an average in terms of using updated reference is good</p> <ul style="list-style-type: none"> <li>✓ Title is needed modification</li> <li>✓ Rational of study the must be clearly stated</li> <li>✓ Revising the whole document is mandatory to correct the grammatical error</li> <li>✓ If result and discussion part is discussed independently is good for clarity. Other ways to know the major finding is difficult.</li> </ul> <p>If the authors /are for discussion and conclusion if selected the major variables is preferable , otherwise discussion the whole variables make it bore .</p>	

**Review Form 1.7**

<b>Minor</b> REVISION comments		
1. Is language/English quality of the article suitable for scholarly communications?		
<b>Optional/General</b> comments	Is good, but needs some grammatical correction	

**PART 2:**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
