

Review Form 1.7

Journal Name:	Archives of Current Research International
Manuscript Number:	Ms_ACRI_113008
Title of the Manuscript:	Frequency of multidrug-resistant microorganisms associated with bacterial coinfections in hospitalized patient with covid-19: A literature review
Type of the Article	Review Article

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>Yes The manuscript highlighted the frequency of bacterial coinfections of MDROs associated with COVID-19 to be considered as an important aspect associated during COVID-19.</p> <p>Yes</p> <p>Yes</p> <p>Yes</p> <p>Yes</p> <p>Yes The references are not written in Vancouver style.</p> <p>Additional Comments:</p> <ol style="list-style-type: none"> In literature search section, it is mentioned that language filter (English) was used while in inclusion criteria articles in English or Portuguese were included. The inclusion and exclusion criteria have to be clearly mentioned accordingly in material and methods The study highlights the association of MDR bacterial coinfections among COVID-19 patients. Is COVID-19 only risk factor responsible for these infections?. It is more important to include other patient related risk factors also to conclude the association with COVID-19 The MDR bacterial coinfections with COVID-19 have to be compared with MDR infections among non-COVID-19 patients to find out meaningful conclusion regarding the association with COVID-19. The definition of MDR microorganisms has to be included in material and method. 	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>Yes</p>	
<p>Optional/General comments</p>		

Review Form 1.7

PART 2:

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
