

Review Form 1.7

Journal Name:	Cardiology and Angiology: An International Journal
Manuscript Number:	Ms_CA_112751
Title of the Manuscript:	Atypical Presentation of Aortic Dissection: A Call for Vigilance in Chest Pain Diagnosis
Type of the Article	Case report

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>I believe the manuscript could be important for scientific community. However, although the authors claim the symptoms of their patient were not typical. It could be counted as typical as well.</p> <p>Is ok.</p> <p>Yes.</p> <p>Yes.</p> <p>I am a bit doubtful about the vital signs and the presentation of the patient. If the patient is having rapidly worsening dyspnea then I would expect tachypnea and lower o2 saturation. I also expected to see a higher blood pressure in this patient.</p> <p>There are many cases about aortic dissection with unusual signs/symptoms: I suggest including and discussing these in your discussion: Acute Type A Aortic Dissection Missed as Acute Coronary Syndrome (10.7860/JCDR/2016/18640.7854)</p> <p>Acute type A aortic dissection involving the iliac and left renal arteries, misdiagnosed as myocardial infarction (https://hdl.handle.net/10520/EJC-cdde60d9a)</p> <p>Concomitant acute myocardial infarction and descending thoracic aorta penetrating ulcer (10.11909/j.issn.1671-5411.2016.11.011)</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>I suggest a revision of the English Language by a native speaker.</p>	
<p>Optional/General comments</p>	<p>I suggest the following to improve the manuscript:</p> <ol style="list-style-type: none"> Describe the severity of the aortic regurgitation. Describe the chest pain. Was it a feeling of pressure? What kind of a pain it was. Why did the patient receive furosemide? How was the course of the patient after surgery and why did she pass away? What do you mean by respiratory failure?
