

**Editor's Comment:**

Paper is suitable for publication with following suggestions

1. write materials and methods precise with actual procedure
2. mention place of sample collection in chanddel district
3. Results and discussion include experimental findings hence there should be no separate subheading
4. It seems like review article not research paper, hence write to the point whatever is findings.
5. Discussion part is too short elaborate it and add more references as per the article.
6. Statistical analysis is incomplete, indicate significant and not.
