

Review Form 1.7

Journal Name:	International Journal of Research and Reports in Hematology
Manuscript Number:	Ms_IJR2H_111432
Title of the Manuscript:	EXFLAGELLATION IN PLASMODIUM VIVAX MALARIA: DIAGNOSTIC DILEMMAS AND SOLUTIONS
Type of the Article	Case report

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</p>	<p>Yes, It told to scientific community about the phenomenon that in rare situations, gametocytes may exflagrate beyond their host owing to unknown reasons possibly enviromental factors.</p> <p>No . Exflaglation of <i>Plasmodium Vivax</i> microgametocyte: diagnostic dilemmas and solutions</p> <p>NO, it is a little bit shalow, it was good to discuss more about presentation of a case.</p> <p>Yes.</p> <p>Yes. But rarely exflaglation may occur in human host.</p> <p>When ever, we want to disscus certain matter using references, it is uncommon to use initial naame. Example, youvcan the first paragraph of discusuion section.. Singh Bhar V, Agarwal M. Exflagellation of <i>Plasmodium vivax</i> microgametocytes in human peripheral blood. <i>Blood, The Journal of the American Society of Hematology</i>. 2018 Aug 16;132(7):767</p>	
<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>No, it needs improvments of its garmmer as well as cohert of the paragraphs</p>	
<p>Optional/General comments</p>	<p>The Abstract should be introductory about cases and findings. Details about the case, such as signs and symptoms, as well as the duration of the illness, should be included in the case report. It should also give alternative and confirming diagnostic methods, such as PCR, to validate the absence of <i>Trypanosoma</i> species or spirochetes such as <i>Borrelia</i>. The gramer and cohert should be cheeked as well, and it also justified why exflagration is rare in humans but common in vectors. Furthermore, the genus first letter must be cappital and Italized, species names also must be Italicised. You can see the <i>Plasmodium vivax</i> throughout the page. Before Abrevations, the long form of words must be writien.</p>
