

**Editor's Comment:**

I have reviewed the revised manuscript and would like to thank the reviewers for helping to improve the quality of the submission. The manuscript can be accepted for publication. However, I would like the authors to do a minor revision in their abstract and discussion section. Please edit these sentences in the abstract as they both convey the same message and one of them should be deleted.

1. Nevertheless, the enduring impairment of left ventricular function following treatment prompts intriguing inquiries into the lasting impact of cardiac thyrotoxicosis on myocardial recovery.

2. However, the persistence of impaired left ventricular function post-treatment raises intriguing questions about the lingering effects of cardiac thyrotoxicosis on myocardial recovery.

Furthermore, the authors never mentioned the persistent LV dysfunction in the discussion section and this should be included in the discussion and what were their differential diagnoses if the LV dysfunction did not improve on follow-up?
