

Editor's Comment:

I have looked at the manuscript and the comments of the reviewers and realized that some minor changes are required before publication.

1. The aim of the study, as given in the abstract, was to investigate the effect of refrigerated temperature on some quality properties of ogi, while the results are indicating the effect of storage period the quality properties, and the conclusion is giving the effect of addition of tigernut fiber pulp emulsion on fermented ogi. All these are not in harmony, even with the title. This can be addressed before publication.
2. The results are presented without regard to statistical test to show significant differences; though it is indicated that Duncan's multiple range test was used.
3. The conclusion is not reflecting the aim of the study.

These are minor corrections and therefore, after correction I support the publication of the manuscript.
