

Editor's Comment:

For some of the comments from one of the reviewers, 'the abstract need to captured more details of the finding' and 'check the last two paragraphs in your introduction, for proper citation', I can not figure out how did the authors address them. The revisions were not mentioned in the response table nor marked in the revised manuscript.

Comment from another reviewer, 'I thought this title “Study on the NIR Spectroscopy of energy content with Hemp Flour”. May suitable', was not considered.

Again, most importantly, all revisions regarding how and where each comment being addressed in the revised manuscript should be clarified in the response document.

Please send the work back to the authors for further revision and clarification.
