

**Editor's Comment:**

Some deficiencies highlighted in the reviewers' comments persist in the evaluated manuscript.

The suitability of the tests used to evaluate secondary effects of airborne contamination is not clear. In my opinion, this detracts from the study.

Likewise, the bibliography is scarce.

However, and given the editorial policy of the magazine, I believe that it can be admitted for publication in the current format.

**Editor's Details:**

Dr. Juan Carlos Martín del Olmo  
Medina del Campo Hospital, Valladolid, Spain.
