

Editor's Comment:

Based on the above assessments, I recommend accepting the manuscript with minor revisions

1. Importance to the Scientific Community:

The manuscript addresses a significant topic within the field of entomology, specifically focusing on how abiotic factors influence sex ratio distortion in insects. This is an area of considerable interest and importance, given its implications for ecological balance and pest management.

2. Title Suitability:

The title is generally appropriate

3. Abstract:

The abstract is complete and successfully summarizes the key points of the text.

4. Subsections and Structure

The organization of the manuscript is fitting, but some minor revisions are necessary to improve clarity and coherence.

5. Figure Description:

The clarification for Figure 1 is lacking and prerequisites correct citation and elucidation.
