<p>Minor REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	I don't have the competence to comment on this	
<p>Optional/General comments</p>	The article states that bio composite synthesis was carried out, but the analysis of the synthesis results of the bio composite is not clearly visible. FTIR only displays the bio composite, it should present data between FTIR of all of reagent materials to produces bio composite and FTIR the bio composite. Based on FTIR, Author can compare of them, if there are changes or no changes between FTIR before and after being made into a bio composite, so it can be said that the bio composite has been successfully obtained.
