

Editor's Comment:

Comments: This is a very good piece of work covering rice development process in relation to the orientation of rice leaves in space. I have read thoroughly. All the reviewers critically reviewed the manuscript and provided good score in favor of the manuscript for publication. Author(s) also revised the manuscript as per reviewer's comments and suggestions but there still need some more improvement. Discussion is short. If there were not recent study authors could clarify the results based on their gathered knowledge on the experimental results. I have corrected the revised manuscript as track change mode need to be revised again. Main problem in this article is in the citation and bibliography (see the attached revised manuscript). Author should correct it. Data analysis is written properly in the methods but not found on the Table of results. After revision submission manuscript would be accepted to publish in BJI.
