

Editor's Comment:

The paper makes a valuable contribution by extending fixed-point theorems to the context of multidimensional partially ordered sets in neutrosophic metric spaces, an area that combines elements of order theory, metric spaces, and neutrosophic logic.

The research is mathematically rigorous, providing clear definitions, lemmas, and proofs to support the proposed theorem. This level of detail is essential for ensuring the validity and reliability of the results.

The author addressed the main concerns from the reviews; the revised version of the manuscript appears to be good. It looks READY for publication.
