

THE IMPACT OF SOCIAL VALUES AND CULTURE ON DISCRIMINATION AGAINST WOMEN

REVIEW REPORT

Title Page

The title is okay and clear.

Abstract

The abstract has 343 words instead of a maximum of 300 words in length. The method used to collect data, especially the design and sampling, is unclear. Findings, discussions, and recommendations should be very clear. Let the whole abstract be in ONE paragraph devoid of subheadings.

Keywords

The number of Keywords is okay. Define social values and culture. Cultural values are confusing

Abbreviations

There are no Non-standard abbreviations identified in the paper

Introduction

The introduction forms the framework of the study under investigation. However, it is long and needs to be refocused, it can be summarized for clarity. Also, there are long statements without reference. Also, it is fair to give citation where the author got information from

Example

The root causes of discrimination and violence against women are related to the general position of women in the society, gender roles, unequal distribution of power between men and women.

***Who said so?** This is definitely a learned cultural phenomenon in every society across the world drawn from the human history. Patriarchal culture not only makes men perpetrators of violence against women, but also makes women silent and voluntary victims who internalized these cultural norms that justify abuse. **Says who?** To deal with the problem, it is not enough to persuade men that what they do against women is wrong and bad. At the same time, women must*

be convinced that this cultural acceptance they have internalized is also wrong. (extract from the author's work) Who said this?

Material and methods

This section is expected to have the literature reviewed and the methodology used. There is a lot of literature (Refer to subheadings two (2) to five (5)). This can be summarized and focused on the topic

Results & Discussion

This section is also missing though partially appeared in section five (5)

A study demonstrated the remarkable degree to which women in some settings have internalized cultural norms that justify abuse (Moreno et al., 2005). Over 50% of women participated in this study agreed that it is acceptable for a man to beat his wife under one or more of the following circumstances: if she disobey her husband, refuses him sex, does not complete the housework on time, is unfaithful, is suspected or infidelity. This rate was higher among women who had experienced abuse than among those who had not. This indicates that women experiencing violence learn from their cultural values to accept or rationalize or condone these kinds of abuses. Empirical findings are necessary in this section

Tables & Figures

Tables & figures have not been utilized though they are effective in data presentation.

Conclusions

This should briefly state the major findings of the study. The one presented is ambiguous and not to the point. This can even be done in point form

Reference style

It is important to note that recent publications are encouraged when doing scholarly work. Reference materials should not exceed ten years unless in classical writing.
