

Editor's Comment:

I overlooked the comments of both reviewers and revised manuscripts entitled "Changes in Indigenous Paddy/rice Marketing Channel Structure: An Evidence from Two Districts of Bangladesh". However, I found that some mistakes still persist in the revised manuscript.

1. Citation Serial:

In the text, the citation serials are not properly maintained.

2. Material and Methods:

i. The eight survey sites (name of the villages) from the two districts where the field survey was conducted, are not mentioned in the report, ii. Data from secondary sources are not clearly cited, and the sources need to be specified, iii. Information about land scale is missing. The categorization of small, medium, and large land, as well as the area of land, is not provided.

3. Results and discussion:

Section 3.5.4 is missing.

Tables 3, 4, and 6 must be referenced by their numbers within the text.

Table 9 is mentioned twice in subsequent lines.

They mentioned Table 9 twice in subsequent lines. Most importantly, there is a lack of discussion explaining the results/findings by referring to relevant research. The number of citations should be increased to strengthen the manuscript.

General comments: Major REVISION is required.
